1) Array:

* It is a variable used to store multiple values in a single variable.

* Each value is stored using a index number

Example:

```
let menu = ["coffee", "Tea", "Juice"];
console.log(menu[0]);
```

Array methods

(i) let numbers = [5, 10, 15, 20]

push:

```
numbers.push(25);
console.log("After push:", numbers);
```

(ii) POP: let numbers = [1, 2, 3, 4]

```
numbers.pop();
console.log(numbers);
```

(iii) map

```
let numbers = [2, 4, 6, 8];
let doubled = numbers.map(num => num * 2);
console.log("Doubled :", doubled);
```

(iv) filter

```
let numbers = [1, 2, 6, 8, 13];
let even numbers = numbers.filter(num => num % 2
console.log("Even numbers : " even numbers);
```

(v) Includes :

```
let order = ["Burger", "pizza", "sandwitch"];
let item = order.includes("Burger");
console.log(item);
```

Output:

(i) After push:

[5, 10, 15, 20, 25]

(ii) After pop:

[1, 2, 3]

(iii) map (doubled):

[4, 8, 12, 16]

(iv) Even numbers:

[2, 6, 8]

(v) Includes:

True.
